Application date: September 30, 1995

(43)

Laid open to public
inspection: April 3, 1997

(71) Applicant: Bock, Joachim, Dipl.-Ing., 38162 Cremlingen, DE

(72) Inventor: same as the Applicant.

(54) PENCIL FOR CLEANING OBJECTS AND ARTICLES OF CLOTHING

(57) Articles of clothing and objects often become fouled on inopportune occasions.

The cleaning or elimination of dirt and stains, especially in clothing can often be done only by going to a wash basin. Because this is not readily possible, e.g., in automobile travel, it is up to the inventiveness of those concerned to find a remedy.

The pencil for cleaning objects and articles of clothing (Figure 1) provides a remedy here. It is possible to remove stains and dirt in a short time by rubbing movements with the pencil that contains a suitable liquid in its hollow body, since fresh stains are easier to remove.

The following is taken from the documents submitted by the applicant.

SPECIFICATION

It often occurs that things such as articles of clothing become soiled during wear due to carelessness.

There is then generally no cleaning agent readily available.

Emergency aids such as handkerchiefs and spit are often the last resort, but generally do not furnish the desired results.

Cleanfix consists of a hollow body that is filled with a liquid that is suitable for cleaning articles. In a dual-chamber cleaning pencil there is a fleece, sponge, felt or the like at the ends.

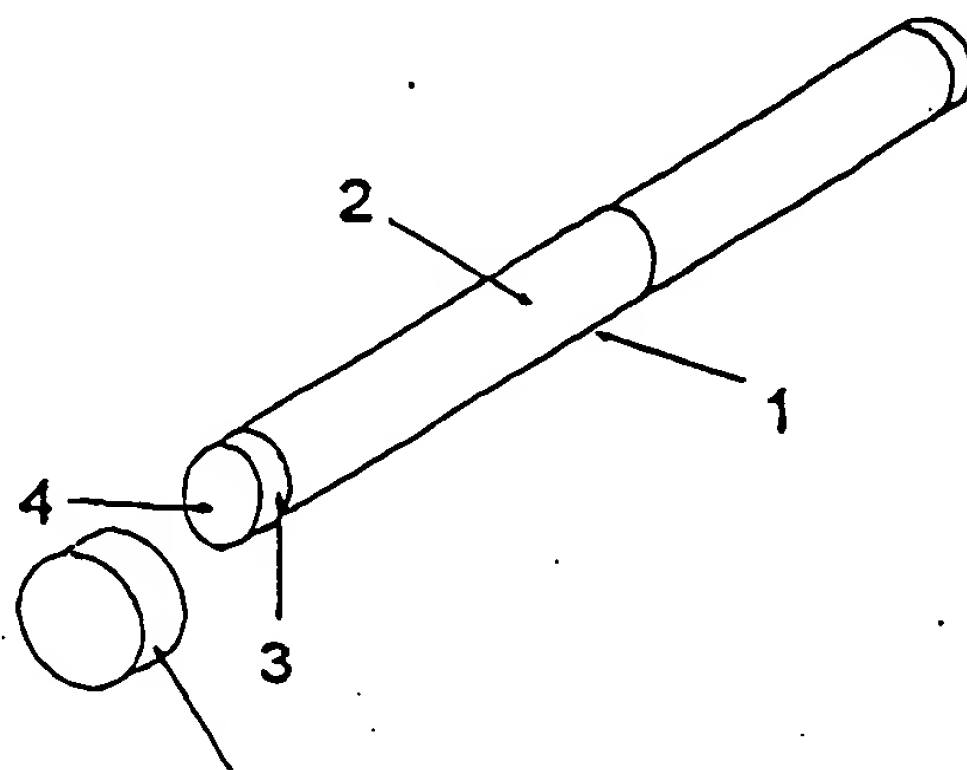

It is possible to remove stains in a short time by rubbing movements with the pencil.

Due to its handy size, Cleanfix can be carried along at all times. It fits like a ball point pen in any jacket or handbag.

PATENT CLAIMS

1. Pencil for cleaning objects and articles of clothing, characterized in that a hollow body (1) is filled with a liquid (2) that passes into an absorbent material (4) joined with the hollow body through an opening (3).

2. Pencil for cleaning objects and articles of clothing according to claim 1, characterized in that the hollow body consists of a chamber that contains a liquid.

Closure cap

3. Pencil for cleaning objects and articles of clothing according to claim 1, characterized in that the hollow body is comprised of two chambers in which liquids are present (Figure 2)

4. Pencil for cleaning objects and articles of clothing according to claim 1, characterized in that the tips (4) can be exchanged.

5. Pencil for cleaning objects and articles of clothing according to claim 1, characterized in that the hollow body can be refilled with a liquid.

6. Pencil for cleaning objects and articles of clothing according to claim 1, characterized in that it can be carried at any and all times due to its pocket size.
